TECHNICAL DOSSIER

Title of the project	Building Boundaries / Contruyendo Lindes
Authors	Inmaculada Amador Pérez
Title of the course	Advanced Architecture Projects-Enabling Master / Proyectos Avanzados-Máster Habilitante
Academic year	2019-2020
Teaching Staff	Fdez-Valderrama/Ampliato/Larive/Casado/Luque/Segura/Llatas/Ordóñez/Compán/Mascort/Vigil/Hildebrand/Galindo/Flacón
Department/Section/Program of belonging	Enabling Master / Máster Habilitante
University/School	University of Seville (US) / Escuela Técnica Superior de Arquitectura (ETSA)

Written statement, short description of the project in English, no more than 250 words

The massive occupation of the territory by the greenhouses and the great changes suffered over the years, have made the current landscape much different from the original. This has caused problems not only by talking about functionality but also at the territorial level; however, this project aims to value this new landscape built by providing solutions and scale to the main problem of disorderly occupation of the territory and the non-respect for keeping the borders between greenhouses.

Located on the northwest edge of La Balsa del Sapo in the "Plastic Sea" in Almería, on an empty plain surrounded by greenhouses, it is proposed to recover the original boundaries of the territory belonging to 1956 and build them creating a new interpretation of the concept of greenhouse making it habitable. The main factor of this project will be the use of next-generation hydroponic crops as opposed to the traditional cultivation of the area. The whole set will form a self-sustaining infrastructure that will be immersed in the environment.

BUILDING BOUNDARIES

The construction of the boundaries between greenhouses as a solution to a territorial occupation's problem of agricultural space

Located on the edge of the raft, the project creates elevated paths for visitors and farmers. The roads are built on the old disappeared boundaries and give scale to the place. The void is built and the full is left empty.

As a result, a territorial object is obtained that remains embedded in the landscape without standing out on the natural of the place, allowing the indigenous life of animal species and vegetation to follow its course along with the project intervention and that if one day it disappears, the landscape and the environment are not damaged and there is no marked residual footprint in the territory.
